

## **Acupuncture Allergy Treatment - Soliman Auricular Allergy Treatment (SAAT)**

A simple, effective allergy treatment... one needle, one treatment

This treatment may dramatically reduce a specific allergen in one treatment with one needle.

### **Acupuncture allergy treatment is capable of addressing almost any negative immune-response allergy such as:**

- Food sensitives (fruits, vegetables, nuts, wheat, gluten, dairy, sugar, preservatives and more)
- Home & Environment (dog, cat, other animals, dust and dust mites, trees, pollen, grasses, etc.)

### **A simplified explanation of how it works:**

Acupuncture allergy treatment is a single procedure that often completely clears or significantly reduces (80-90%) a very specific health concern. Both western and eastern doctors agree that allergic responses of all kinds develop from an overly sensitive, “malfunctioning” immune system. While western doctors mainly address allergies by suppressing the immune response, eastern medicine using the acupuncture allergy treatment method, works to address the immune system’s negative response to an allergen. The acupuncture allergy treatment “reprograms” your immune system to stop over reacting to allergens. If the body has the ability and power to develop the over active immune response, it has the ability to reverse it as well.

### **How the Procedure is completed**

The treatment will involve a virtually painless insertion of a tiny (3mm) hair-thin, sterilized, stainless-steel acupuncture needle into the skin of the outer ear. Since the ear has complex neurological, embryological, and electromagnetic connections to the brain, this makes it possible to treat many issues. This technique has long been medically accepted by the World Health Organization.

For this treatment, our Licensed Acupuncturist will conduct an examination with an instrument to locate a single pinpoint spot within the ear that correlates with the liver. Its location will vary from patient-to-patient. The tiny needle is covered with a small bandage, which will protect and secure the needle so that it maintains stimulation for 3 weeks. At the end of 3 weeks, the patient will return to the office for removal and re-testing to the allergen. Clinical results show that this can trigger the body in such a way that the allergy/sensitivity goes away itself, naturally.

### **Acupuncture Allergy Treatment Cost**

Consultation, Testing and Treatment – This includes a consult and treatment of one allergen. Includes needle placement and removal appointment - \$375.

Additional allergen treatments after initial consult and treatment is \$150 per allergen. Includes needle placement and removal appointment.
